LET'S GO!
SMALL STEPS
### Move More
There’s no better time to be active!

- Pregnancy is a great time to explore being active! Now is the time to set healthy patterns for you and your baby.
- For most women, it’s safe to be active. Walking, swimming, fitness classes, or prenatal yoga are all good options.
- Moving for 30 minutes on most days is good for you and your baby. You can split it up—10 minutes at a time has benefits.
- Stay comfortable while you’re active—wear loose clothing, stay out of the heat, and drink plenty of water.
- Being active helps with some aspects of pregnancy, like constipation and leg swelling.

### Eat Real
Fresh, natural foods help your baby grow

- Choose foods in their natural form. Eat less packaged food.
- Eat a variety of fruits and veggies. It’s good for you, and may even teach your baby to like different tastes!
- If some raw vegetables bother your stomach, cook them. Try roasting, steaming, or sautéing.
- Iron is important. Lean red meats, poultry, beans, and peas are all good sources.
- Most women need only 300 extra calories each day during pregnancy. That’s a piece of whole wheat toast with peanut butter and an apple.

### Drink Water
It’s the best choice for you and your baby

- Limit sugary drinks. Reach for water instead.
- Eat foods with water in them like oranges, cucumbers, and watermelon.
- If water makes you queasy, try sucking on crushed ice cubes.
- Having constipation? Water helps to keep things moving.
- Add flavor. Put a fruit wedge in your water. Try fresh ginger and lemon to settle your stomach!

### Rest Up
Make time for sleep and relaxation

- Sleep is a priority! Try for at least 8 hours of sleep, and take short naps if you are still tired.
- Trouble getting comfy? Try a pillow under your belly or between your legs, or a rolled-up towel behind your lower back.
- Find time to relax. Take 10 minutes a day of quiet time to refocus and energize.
- For fewer nighttime trips to the bathroom, drink plenty of water during the day then cut back a few hours before bed.
- Heartburn can be a sleep stealer. Limit fat, acid, and caffeine. Eat smaller meals and don’t lie down after eating.
