CANCER
REGISTRY
REPORT

Cancer Registry

The Pen Bay Medical Center Registry provides data management services to comply with National Institute of Health and the State of Maine reporting regulations. We have been collecting the data since 1988 and now have over 7,100 cases in the registry. Patients diagnosed and treated at PBMC since that time are followed for their lifetime.

In 2012 we had 276 new cancer cases. Of those, 210 were diagnosed or had their first course of treatment here. We collect data such as demographics, type of tumor, extent of disease at diagnosis, all treatments received, outcomes, and any recurrences. This information helps to identify trends in diagnosing and treating each type of cancer within our community. Additionally, this is helpful as a method of maintaining quality measures in our own hospital. The information we collect goes on to the state and national levels, and is included in the various cancer statistics you see in the news.

A multidisciplinary general tumor conference is held on campus monthly. Representatives from pathology, radiology, medical oncology, radiation oncology, surgery, and other specialties contribute to this forum. Conferences review all major cancer sites treated at the hospital and discuss diagnostic and treatment options that would be the most beneficial for the patient. We have also had the opportunity to join in other Maine Hospital Tumor Conferences such as Maine General Medical Center, Eastern Maine Medical Center and Maine Health System Breast Tumor Board.

We are very proud to have been accredited with the American College of Surgeons, Commission on Cancer since 1979. Every three years we receive an on-site survey based on established quality standards. At our most recent survey, we received no deficiencies with commendations to boot. The commendations were for excellent compliance with College of American Pathologists and national reporting, and for our outreach programs for prevention and early detection.
